

DAODU JOHNSON OLUWAFEMI

Full Stack Software Engineer

femiwebfullstack@gmail.com | +2349063932266 | Nigeria

LinkedIn: <https://www.linkedin.com/in/johnsonprofile> GitHub: <https://github.com/techfbi> Portfolio: <https://ojavy.vercel.app>

PROFESSIONAL SUMMARY

Full-stack software engineer working across React, TypeScript, Node.js, PostgreSQL, and MongoDB. Recently designed and shipped a production-grade web application end-to-end, a secured auth system with token-based authentication, auth token theft detection and revocation, and a custom content management flow, alongside a separate application combining computer vision, context aware processing, and domain-locked LLM integration. Currently deepening my expertise in application security and DevSecOps.

TECHNICAL SKILLS

Primary Stack: React, TypeScript, JavaScript, Next.js, Tailwind CSS, Node.js, RESTful APIs, GraphQL, OAuth

Databases: PostgreSQL, MongoDB, Redis

AI: LLM Integration, Prompt Engineering, Vision AI, RAG

Tools and Platforms: Git, Github, Postman, Figma, Cloudinary, Supabase, Render, Vercel, Auth0

PROFESSIONAL EXPERIENCE

IT Intern | Vital links, Osogbo, Nigeria

August 2023 - December 2023

- Participated in code reviews and incorporated feedback from mentors.
- Collaborated with designers and backend developers to deliver application features
- Diagnosed software and network problems.
- Performed routine system maintenance and updates.

PROJECTS

Flax | **Full-Stack AI Nutrition & Hydration Assistant** | flax-ui.vercel.app

Designed and built an end-to-end nutrition and hydration tracking platform from Figma to production. Engineered a domain-scoped AI assistant capable of identifying meals from photos, estimating nutritional values, and answering nutrition-related questions using each user's health profile. Built a multi-provider AI vision pipeline with prompt-grounding and fallback models to improve food recognition reliability, alongside a personalized meal recommendation engine that filters suggestions based on allergies, pantry inventory, and health goals. Implemented secure JWT authentication with refresh token rotation, reuse detection, and Redis-backed rate limiting to protect against session hijacking and brute-force attacks, web push notifications, and daily streaks. Deployed the frontend on Vercel with the backend on Render. Early beta users reported improved hydration habits and found meal tracking significantly easier to maintain.

- **Role:** Founding Full-stack Engineer

- **Stack:** React, TypeScript, Node.js, Express, PostgreSQL, MongoDB, Redis, Resend, Tailwind CSS, LLM

Auth Gateway | <https://github.com/techfbi/Auth-Gateway> | **documentation:** <https://authgatewaydoc.vercel.app>

Built a reusable, standalone authentication backend for developers seeking full control over authentication without relying on managed identity providers. Engineered a secure authentication architecture featuring refresh token rotation with token family tracking and automatic reuse detection, HttpOnly cookie delivery, in-memory access token management, Argon2id password hashing, OTP-based email verification, Google OAuth with strict provider separation, Redis-backed per-endpoint rate limiting, and comprehensive developer documentation to simplify integration.

- **Role:** Backend Engineer
- **Stack:** Node.js, TypeScript, Express, PostgreSQL, Redis, Resend, JWT

Favvy Song | <https://github.com/techfbi/full-stack-MERN-song-app> | live: <https://favvy-song.onrender.com>

Built a full-stack MERN application to deepen practical experience with authentication, REST APIs, and production deployment. Implemented JWT access and refresh token authentication, a security question-based identity verification flow for password recovery, allowing users to securely reset credentials without email verification, reusable Axios API client, protected routes, and CRUD functionality for managing personalized song collections with sorting by rating and creation date. Deployed the frontend and backend independently.

- **Role:** Full-stack developer
- **Stack:** Javascript, React, Node.js, Express.js, MongoDB, JWT, Axios, REST APIs, CSS

Simon Game | JavaScript Fundamentals | **Play here:** techfbi.github.io/Simon-Game/

Recreated the classic Simon memory game to strengthen understanding of JavaScript event-driven programming. Implemented randomized game sequence generation, DOM manipulation, keyboard and click event listeners, state management, animations, audio feedback, and progressive level logic using HTML, CSS, JavaScript, and jQuery.

EDUCATION

Bachelor of Technology in Information Technology

Federal University of Technology, Akure, Ondo State, Nigeria.

September 2018 - November 2024

CERTIFICATIONS

- **Full-Stack Development Bootcamp** | Udemy

- *The Complete Full-Stack Web Development Bootcamp (2025/26)* - <https://ude.my/UC-a3b3308e-15b9-4950-8f96-d2419d2a1970>
